The invention is used to induce or accelerate a healing process, particularly of an ulcer, burn, laceration, surgical incisic necrosis, pressure wound, diabetic ulcer and to induce or accelerate angiogenesis. The present sequence is human hpa protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-MAR-1999;

New antisense oligonucleotide hybridizable with a polynucleotide encoding a polypeptide with heparanase activity, useful for treating diseases such polypeptide cancer and autoimmune disorders.

Claim 3; SEQ ID NO 10; 108pp; English

CC polymicleotide or a polymicleotide analogue of at least 10 bases being catalytic activity. Also included are amethod of in vivo downregulating contracterised by heparanase activity, comprising administering the ASO in vivo), a method contracterised by heparanase activity, comprising administering the ASO in vivo), a method contracterised by heparanase activity, composition comprising administering the ASO and a carrier, an antisense nucleic acid construct (comprising a promoter contribution contribution) and a polymicleotide sequence directing the ASO and a contisense RNA sequence of at least 10 bases being hybridisable in vivo antisense nucleic acid construct (comprising a promoter contribution contribution) and comprising the ASO and a contisense contribution activity, and the synthesis of an contribution of a comprising heparanase activity (comprising doministering in vivo antisense oligonicleotide construct), a pharmaceutical composition comprising the antisense mucleic acid construct), a pharmaceutical composition contisense oligonicleotide comprising a polymicleotide or a polymicleotide strand encoding a polymicleotide strand being contribution and conditions, with a portion of a polymicleotide strand being contribution are useful for the prevention and/or treatment of the prevention are useful for the prevention and/or treatment of as heparanase catalytic activity. The methods and compositions of the construct of the prevention and contributy, such as heparanase dependent cancer, cancer, autoimmune reaction and contributy. Such construct is a human heparanase is located on chromosome 4. The invention relates to an antisense oligonucleotide (ASO) polynucleotide or a polynucleotide analogue of at least 10 polynucleotide or a polynucleotide analogue of at least 10 polynucleotide or a polynucleotide analogue of at least 10 polynucleotide or a polynucleotide (ASO) polynucleotide or a polynucleotide analogue of at least 10 polynucleotide or a polynucleotide (ASO) polynucleotide or a polynucleotide analogue of at least 10 polynucleotide or a polynucleotide analogue of at least 10 polynucleotide or a polynucleotide analogue of at least 10 polynucleotide or a polynucleotide analogue of at least 10 polynucleotide or a polynucleotide analogue of at least 10 polynucleotide or a polynucleotide analogue of at least 10 polynucleotide analogue of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a transgenic non-human animal whose genome comprises an exogenous polynuclectide sequence, including a promoter active in tissues of the non-human, a region encoding a human heparanase, where the promoter and the region encoding human heparanase are operably linked in the exogenous polynucleotide such that human heparanase is expressed in at least a portion of the cells of the non-human animal. The methods and compositions of the present invention are useful for the production of transgenic animals expressing heparanase, to be used as models for human diseases such as cancers, viral infection, restenosis, neurodegenerative diseases, atherosclerosis and pulmonary disorders. The present sequence is human hap protein used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New transgenic non-human animal expressing heparinase, useful as models for human disease, such as cancers, viral infection, neurodegenerative diseases, restenosis, atherosclerosis and pulmonary disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Zcharia E,

                                                                                                                                                                                                                                                                                            The specification describes a polypeptide having heparanase (hpa) activity. The recombinant protein is used as a modulator of heparin-binding growth factors, cellular responses to heparin-binding growth factors and cytokines, cell interaction with plasma lipoproteins, cellular susceptibility to viral, protozoal and bacterial infections or conditions such as wound healing, angiogenesis, restenosis, atheracterosis, inflammation, neurodegenerative diseases, and viral heparin, and anti-heparanase can be used to neutralize plasma immunodetection and diagnosis of micrometastases, autoimune lesions, an present sequence represents human heparanase
                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 6;

CC activity. The heparanase (hpa) polynucleotide is useful in gene therapy, CC particularly in treating tumour, inflammation or autoimmunity. CC particularly, the polynucleotide is useful in modulating the CC bioavailability of heparin-binding growth factors, cellular responses to CC interleukin (II)-8), cell interaction with plasma lipoproteins, cellular CC susceptibility to certain viral and some bacterial and protozoa and interactions, or disintegration of neurodegenerative plaques. The CC polynucleotide is also useful in wound healing (e.g. thermal, chemical or radiation burne), and in the treatment of angiogenesis, restenosis, catherosclerosis, inflammation, neurodegenerative diseases (Gerstmann-CC Straussler Syndrome or Creutzfeldt-Jakob disease), and some viral, (X

                                                                                                                                                                                                                                                                                                                                            The present invention relates to methods and compositions for inducir and/or accelerating wound healing via the catalytic activity of heparanase. The invention is used to induce or accelerate a healing process, particularly of an ulcer, burn, laceration, surgical incisis necrosis, pressure wound, diabetic ulcer and to induce or accelerate angiogenesis. The present sequence is human SK-hepl protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (ILAN/)

The invention relates to an antisense oligonucleotide (ASO) comprising a C polynucleotide or a polynucleotide analogue of at least 10 bases being c polynucleotide strand encoding a polypeptide having heparanase c activity. Also included are a method of in vivo downregulating c attalytic activity. Also included are a method of in vivo downregulating of treating a subject suffering from a pathological condition of c characterised by heparanase activity, comprising administering the ASO in vivo), a method c characterised by heparanase activity, comprising administering ASO to c carrier, an antisense nucleic acid construct (comprising heparanase c c c sequence and a polynucleotide sequence directing the ASO and a c sequence and a polynucleotide sequence directing the synthesis of an c sequence and a polynucleotide sequence directing the synthesis of an c under physiological conditions, with a polynucleotide strand encoding a compresulating heparanase activity (comprising administering in vivo c antisense nucleic acid construct), a method of in vivo antisense nucleic acid construct and a carrier, and an comprising the antisense nucleic acid construct and a carrier, and an antisense oligonucleotide comprising a polynucleotide or a polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          멍

The methods and compositions of the present invention are useful for the prevention and/or treatment of diseases or conditions associated with aberrant heparanase activity, inflammation. The gene for human heparanase is located on chromosome when research and the present invention and the present cancer, autoimmune reaction and the present invention and the present

The methods and compositions of the present invention are useful for the production of transgenic animals expressing heparanase, to be used as models for human diseases such as cancers, viral infection, restenosis, neurodegenerative diseases, atherosclerosis and pulmonary disorders. The present sequence is human SK-hepl hpa protein used in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                    The invention relates to nucleic acid sequences that encode heparanase enzymes having endoglucuronidase activity. Recombinant heparanases are capable of removing the HS side chain from heparan sulfate proteoglycan (HSPG). Sulfated oligosaccharides, sulphonates or HSPG can be used to inhibit heparanase, this is useful for treatment of a physiological or medical condition associated with elevated heparanase activity, such as metastasis, angiogenesis, wound healing, angioplasty-induced restenosis, arteriosclerosis, atherosclerosis and inflammation. The human, murine and rat heparanases can be used to enhance wound healing, especially associated with tissue development and repair. The conditions mentioned above can be diagnosed using specific antibodies, and also using primers and probes specific for the heparanase polymucleotides. Other uses of the heparanases include sequencing sulfated molecules such as HSPG. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Polynucleotides encoding mammalian endoglucuronidases, heparanases, useful to promote wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Heparanase; endoglucuronidase; heparan sulfate proteoglycan; enzyme; metastasis; angiogenesis; wound healing; angioplasty-induced resteno arteriosclerosis; atherosclerosis; inflammation; tissue development;

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pcMVSPQRT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Contact: Genoscope
